Guide Book of Alzahra Educational and Treatment Hospital
Truly, those are closer to God that feel sympathy for people, the attempts are fulfilled when a patient finds the health again and thanks God. We are pleased that we work in a hospital that is honored to bear the name of Zahra (AS) and we thank God that we have found the chance to take steps for health of ladies of our society. Al Zahra hospital is honored that as the most important Ladies’ hospital of the Northwest, hosts patients using the capable, experienced and sympathetic expert and high-tech equipment. We hope that under the light of Lord Almighty's kindness and having your suggestions and recommendations we can take better steps for improving the health in the society.

The life is the scene for our artistic life

    Everybody comes, sings and leaves

    The scene stands there

    Those are fortunate whose

    Songs remains on the scene …

The head of Al Zahra Educational and Treatment Hospital

Introduction
Alzahra Ladies’ Hospital as one of the most important center of midwifery and obstetrics and one of the centers which offers preventive, diagnostic, treatment and rehabilitation services centers for mothers and infants in Northwest of the country, the aim of this center is to take steps for raising the health of the pregnant mothers and infants and by offering earnest services and group works and observing organizational values such as sunniness hopes to satisfy the costumers and respond to the needs of the referents using high-tech and advanced equipment by concentrating on continuous improvement of service quality.

Introducing the hospital
Alzahra Educational, Treatment and Screening center was built in 1972 in land with total area of 3799.1 sqm., with 150 fixed beds, 127 active beds and 6 operation rooms for offering midwifery services. By having different developmental projects that was carried out by Nobar Tabriz Charity Organization and partnership of Tabriz University of Medical Sciences, the total area has increased to 25999 sqm. and 357 beds.

The mission of Alzahra Educational and Treatment Center
1. Active participation in raising the health of mothers and infants in Northwest of the country
2. Offering midwifery and obstetrics services
3. Offering subspecialized services for high-risk pregnancies, infants and oncology of ladies, infertility and Urogynecology
4. Screening different cancers of ladies and embryonic disorders
5. Educating students in medical and paramedical fields and specialized and subspecialized residency
6. Participation for doing scientific and functional researches

The vision of Alzahra Educational and Treatment Center
We attempt to offer educational and research services to scientific, caring, diagnostic and specialized and subspecialized treatment sector of ladies, midwifery and infants as grade one educational and treatment center.

Specification of the hospital
- Achieving first rank in evaluation and accreditation (during evaluation course for organizations using accreditation model) until now
- The selected pilot center for different plans of quality raising such as amending the structure (re-engineering) EMP, EFQM etc. by Ministry of health, during long years
- The main professional referral center of gynecology in Northwest of Iran
- Equipped with advanced laboratory department and diagnostic and pathology sets
- Attendance of the best physicians and engaged personnel

Specialized and subspecialized clinic
Specialized and subspecialized clinic (in two morning and evening shifts) has following wards:
Morning shift (educational and treatment clinic)
1. Perinatology
2. Urogynecology
3. Internal ward
4. Specialized for gynecology
5. Specialized Cardiovascular disease
6. Subspecialized nephrology (kidney and blood pressure)
7. Adults digestion and liver subspecialized ward
8. Pain and anesthesia clinic (anesthesia consulting)
9. Ladies oncology and cancer screening
10. Radiotherapy
11. Genetic clinic
12. Physiotherapy

Evening shift (Special clinic)
1. Subspecialized infants (follow up clinic for high-risk infants)
2. Specialized clinic for children
3. Specialized gynecology, infertility and colposcopy, endometrium biopsy, other outpatient surgeries by gynecology specialist and subspecialists
4. Ladies oncology
5. Specialized and subspecialized cardiovascular disease, echocardiography, sport test by cardiovascular specialist and subspecialists
6. Infertility consulting- IVF
7. Feeding and diet specialized ward
8. Sexual health clinic (social medicine specialized ward)
9. Specialized immunology
10. Audiometry (audiometry screening)

Admission and allocating visit time section is located in building No. 2 and patients and their companions can refer to website of the doctors in www.shafadoc.ir and register in the website and according to site guide can reserve a visit date. For subspecialized clinics of perinatology and oncology, the morning shift the visit date will be directly and according to given letters of introductions.

Medical teams of the clinics
- Gynecology expert and perinatology fellowship, ladies' oncology, urogynecology, in fertility
- Pediatrics and subspecialized expert of infants
- Anesthetist
- Internist
- Internist, cardiovascular subspecialist
- Internist, kidney and blood pressure subspecialist (Nephrology)
- Internist and subspecialist in digestion system and liver of adults

In this department, specialized diagnostic and treatment measures are takes as follows:
- Controlling the condition of embryo and mother- ECG (mother electro-cardiology) and NST (Embryo electro-cardiology)
- Pap test screening
- Pipelle biopsy
- Amniosynthesis
- IUT (Inter-uterus Transfusion)
- Colposcopy, veloscopy
- Outpatient procedures for ladies
- Circumcision

Emergency

The emergency ward of the hospital offers services for on time and fast admission of the referents actively and continuously, by specialists of gynecology, general physicians of the emergency ward, residents and specialists and experienced personnel. This ward is located in ground floor of the building No. 1 and it is accessible through Ashkan alley door and the main gate. The ward has CPR, NST and outpatient operation, triage rooms, preparation room for birth, isolation room, examination room, controlling beds, and doctors' resting room and waiting halls. Among the services in Triage outpatient
ward and ESI hospitalization ward is temporary hospitalization end emergency controlling, NST outpatient procedures, ECG and other services for referents.

Maternity ward

This ward has suitable facilities and experienced midwifery personnel and gynecology specialist for patients. The services include three parts such as pre-birth, birth and after birth services. The patients include all pregnant mothers that refer to the hospital with birth pain or under control because of having cardiac disease, high blood pressure, pre-eclampsia, diabetics, lupus, HELLP syndrome, kidney disease etc. that in the case of lack of control the pregnancy is terminated.

High-risk pregnancy ward

Patient room is equipped with separated bathroom and WC, nurse calling system and other facilities. In this ward mothers with high-risk pregnancy such as bleeding, thromboembolia, pre-eclampsia, diabetics, cardiac problems, delay in embryo growth, giving birth before due date symptoms, repeated miscarriage, drip etc. are controlled. In the case of need perinatology doctors are consulted. Fetal Medicine unit of the clinic are directed by perinatology specialists that diagnosis of embryo disorders such as Down syndrome … on time diagnosis of cardiac disorders of the embryo (amniosynthesis) and on time measures in emergency and IUT or injecting blood to the embryo all are done in this ward.

Mothers’ hospitalization wards (Cesarean and midwifery)

Cesarean and midwifery wards are equipped with separated bathroom and WC, nurse calling system and other facilities. Cesarean and midwifery wards offer following services:

- Caring the patients (cesarean and natural birth) with liver, kidney and epilepsy and coagulation disorders, pre-eclampsia, intensive pre-eclampsia, HELLP syndrome, convulsion, cardiac disease, thyroid, and mothers with cancer, inborn disease, syndromes, autoimmune disease such as lupus, etc.
- Caring patient that have NVD (natural birth) hysterotomy, embryo delivery after 20th week all are hospitalized in this ward.
- Caring the patients that had cesarean.
- Patients that are hospitalized for elective cesarean by the professors for pre-operation procedures and after-cesarean cares.
- Patients that had operation such as pansage, hematoma discharge, repairing endometriosis, etc. all are hospitalized in this ward.
- ICU ward for natural or cesarean birth are transferred to this ward after passing intense first stages according discretion of the doctor.
- Discharged patients that need urgent referral and indication are hospitalized in this ward after natural and cesarean delivery (up to 42 days after cesarean).
Infants' viewing ward

This ward is located near to mothers' ward and offers following services:

- Newborn infants that are received from operation and maternity ward, are given to mother after medical examinations and doing routine measures (filing, injecting vitamin K).
- Infants whose mothers are in ICU, are controlled in this ward (These infants are given to their mothers for feeding).
- Doing audiometry and vaccination for under control infants
- Infants who need special care (controlling blood sugar, oxygen therapy) are controlled in this ward.
- Educating mothers to care infants (that includes mothers whose infants are hospitalized in NICU ward).
- Educating mother for feeding
- Infants who need special care such as controlling the pulse of oximetry, oxygen therapy, etc. must be cared in this ward until having stable condition then must be transferred to mother or other NICU or infant wards.
- Infants with feeding problems are transferred to infants or NICU ward.
- Admission or caring infants whose mother has been transferred from other cities.

Infants' subspecialized ward

Infants' ward in addition to medical care for patient infants such as infants with LCD (long term breathing disease), offers following educations: family based care (preparation for care in home), educating for feeding with breast milk, educating to hug children by Kangaroo method and messaging the infant and other educations such as audiometry, vaccination, thyroid screening, Phenylketonuria test, eye disease, etc. and following up after discharge (until the infant is 2 years old).

Special care wards for NICU infants

NICU wards (all have oxygen, air and central suction) is equipped with most advanced sets such as ventilator, warmer, incubator, phototherapy, different monitors for controlling SPO2, BP, etc. These wards are equipped with isolation rooms for doing eye consultation and as the first center that offers its services using most advanced hybrid incubators and ventilators and observing Nidcap principles. Full equipment and experienced personnel of the ward, have changed Alzahra Hospital to referral center for high-risk pregnancy and pre-date delivery in northwest of the country. The given services in this ward include following issues:

- Evolutionary care of premature and high-risk infants
- Caring Asphyxia infants with cool cap set
- Breathing care of high risk infants
- Feeding care of premature and high-risk infants
- Caring and treating infants with intense neonatal jaundice who need blood exchange transfusion
- Injecting blood products
- Giving services to infants who need surgeries such as diaphragmatic hernia, esophageal atresia, imperforated anus, cardiac problems until sending them to children hospital
- Treatment measures such as injecting surfactant
- LP (Lumbar Puncture)
- Giving services to infants with ROP before and after laser therapy or intravitreal injection
- Doing special tests such as metabolic, biochemical, hormone tests etc.
- Tests for body exudations
- Doing cultivations such as blood, urine, brain and spinal cord liquids cultivation and other body liquids
- Making a central venous catheter such as hub catheter
- PICC (Making a central venous catheter through peripheral venous)
- Phototherapy

**Milk Bank**

Breast milk bank was established in Iran in July 2016 according to instructions of breast milk of America HMBANA in Alzahra Hospital in Iran for feeding infants that are deprived from breast milk for any reason and premature infants; according to religious rules this type of feeding it does not have any problem. Central breast milk bank, has sets such as pasteurization, autoclave, lacto scan, dish washing machine and refrigerator. Breast milk bank, is located besides the central laboratory that it facilitates sending milk samples to laboratory for tests such as microbiology. After confirming the health of mothers and some tests, the milk is pasteurized to prevent the transference of HIV, C and B Hepatitis, CMV and regular bacteria. Through pasteurization main part of the mineral materials are protected, therefore they are preferred to infant formula. In order to encourage the feeding mothers to donate their milk to milk bank, free tests such as HIV, Hbs, C and B Hepatitis (some tests are done before donating the milk for confirming the health of mothers and after the first test by six month interval if the mother continues to donate milk) and some free tests for infants are done until they are one year old.

**Venous feeding center**

This center for the first time was established in June 2017 in Alzahra Hospital in which venous feeding liquids (TPN) are kept in clean room through Aseptic method and are prepared using full automatic sets and combiners and are distributed in NICU and using this method some side effects such as sepsis are reduced in premature children.

**Operation rooms**

This center has 7 operation rooms and 1 recovery that include necessary equipment for all types of specialized and subspecialized operations for ladies. Presence of resident or on-call anesthetist in operation room and gynecology specialist or fellow resident has facilitated the 24-hours services. Among regular surgery operations that are done in operation rooms, we can refer to cesarean, curettage (that include curettage therapy, discharge curettage, missed abortion, MOL suction curettage), hysterectomy, colporrhaphy, laparotomy (EP), lymphadenectomy, laparoscopy, hysteroscopy, anesthetized examination, gonad cystectomy (Hemorrhagic, dermoid, malign cyst) etc.

**Surgery ward**

Surgery ward is equipped with nurse calling system, separated WC and bathrooms and other facilities. Those who had gynecological surgery, are hospitalized in this ward; among them we can refer to patients with hysterectomy, gonad cyst, myom, inborn anomaly in generative organs, operation tack, out of uterus pregnancy endometrioses, malignity in generative organs, uterine prolapse, laparoscopy, aesthetic surgeries, patient that are under control for hyperstimulation, defective abortion, termination of pregnancy under 20 weeks, pregnancy period disease under 20 weeks, pregnancy crave, molar pregnancy, manipulated abortion, legal abortion and other side effects after surgery.
**ICU**

The function of ICU, include treatment and caring services for those mothers and pregnant ladies whose life condition is critical. This ward is the only ICU unit for ladies in Northwest of the country and is equipped with most advanced and newest sets for caring high-risk pregnant mothers, mothers with side effects after natural pregnancy and cesarean, patients with side effects after surgery (patients with internal, cardiac, thorax, coagulation problems and pregnancy poisoning, etc.) by the experienced doctors and nurses.

**Chemotherapy ward (Outpatients)**

This ward was established in December 2014 and offers services for ladies with cancer that are introduced by oncologists who have contract with the hospital. Among the services we can refer to chemotherapy, of digestion system (stomach, bowel, gallbladder, and rectum) lungs, lymphoma, liver, neck tumors, gonad, uterus, bladder, brain cancers etc.

**Infertility ward**

Research and infertility treatment center in Alzahra Hospital was established in 1997 according to standards of Ministry of Health, Treatment and Medical Education and now is one of the most successful center in treating infertility in Iran and is considered as the only specialized infertility clinic in governmental sector in Northwest of the country and include: infertility clinic, laboratory, operation and recovery rooms, and offers tourism therapy services to neighbor countries such as Azerbaijan etc. This center using the most advanced techniques of the world can diagnose and treat infertility by doing laser hatching, ICSI, IVF, IUI for increasing the probability of balstocyt implementation in uterus, maintenance and freezing the embryo, ovum, and spermatozoon by extracting the spermatozoon using PESA and TESE methods and consultation for repeated miscarriage. Moreover, determining the gender of the embryo is done in this center. Diagnostic, treatment and research for infertility facilities include andrology, embryo and spermatozoon freezing, sonohystogram, laparoscopy, enteric and vaginal ultrasound check, IVF and ICSI laboratory.

**Oncology ward**

All rooms are equipped with welfare facilities for patient and their companions. This ward not only is the only oncology ward in Northwest of the country but also provides ladies with generative organ cancers and related tumors of gonad and uterus the best services. In the case of need for chemotherapy, patients with oncology problems that need hospitalization for more than 6 hours, are hospitalized and chemotherapy is done.

**Laboratory of the center**

The central laboratory is located in second floor of the building No. 2 using standard space and specialized equipment and the emergency laboratory is located in ground floor besides the emergency. The laboratory of the hospital includes two pathology and clinical sections. In pathology section the realted tests of generative organs, Pap test, during-operation samples and frozen section is carried out and clinical laboratory includes biochemistry, hormonology, microbiology, serology, immunology, hematology, coagulation tests, PCR and blood bank. Central laboratory responds to the patients by twenty four hour work.
Imaging (Ultra sound, radiology, mammography)
Imaging section of Alzahra Hospital, include ultra sound, radiology and mammography wards that among its equipment we can refer to mammography, ultra sound (fixed and portable) and radiology (portable and fixed). Imaging section offer services using experienced personnel and resident doctors and on-call professors of radiology all 24 hours a day and the center offers different imaging (chest, abdomen, upper and lower organs) and ultra sound for ladies and children (color Doppler and normal one).

HDU (High dependency care unit)
Considering the high risk of the patients of this hospital and the limitation of ICU capacity to admit ladies with high risk pregnancies. This unit has hospitalized them, and do accurate monitoring of post partum patient in the first 6-8 hours after the procedure.
Gynecologists and midwifery doctors of the hospital

Type of specialty: Urogynecology fellowship

Dr. Fatemeh Mallah

Dr. Parvin Bastani

Different types of treatment and surgery Urogynecology:

1. Examining and diagnosis of urinary incontinence
2. Examining and diagnosis of prolapses in pelvis, uterus and bladder
3. Doing Urodynamic tests
4. Medical treatment of urinary incontinence
5. Surgical treatment of urinary incontinence
6. Non-surgical treatment of the prolapses in uterus and bladder such as using pessary, and physiotherapy of pelvis base
7. Surgical treatment of the prolapses in pelvis base such as hysterectomy, sacrocolposcopy, hysteroscopy, colporaphy, enterocele renewal, surgery for vaginal cysts, rehabilitation of rupture in anal sphincter

Specialized midwifery activities

1. Care before, during and after pregnancy
2. Doing natural birth, physiologic birth, painless birth, cesarean
Type of specialty: Subspecialized in oncology

Dr. ParvinMostafaGharabaghi  Dr. Mehri Jafari  Dr. SayyahMelli

Dr. VahidehRahmani  Dr. MaryamVaezi  Dr. ElahehSahebOladMadarek

Different types of specialized services and surgeries for ladies (oncology):
1. Educating gynecological and midwifery disease to fellowships of ladies' oncology, midwifery residents, general surgery residents, students of medicine, students of nursing and midwifery
2. Screening cancers of ladies' generative organs and breast
3. Diagnostic and outpatient treatments for general disease of women with cancer in generative organs
4. Chemotherapy for patients of generative organ cancers
5. Follow up the patients afflicted with generative organ cancers

Specialized activities in the field of midwifery
1. Managing patients with during-birth and after-birth bleeding
2. Managing patients with gonad tumors during the pregnancy
3. Providing consultations for ladies’ cancers including surgery, urology, pathology, radiotherapy, chemotherapy, midwifery, ladies' surgery, high-risk pregnant women
Type specialty: Infertility

Special and surgical services:

1. Visiting the couples with reduction in fertility
2. Trans-vaginal ultra sound check of the pelvis (uterus and related organs)
3. Medical treatment for stimulating the ovulation
4. Doing IUI
5. Doing ICSI and IVF
6. Doing sonohysterography (SIS)
7. Diagnostic and curative laparoscopy for endometriosis, ectopic pregnancy, pelvis adhesions, gonad cyst
8. Discharging gonad cyst through vagina under anesthesia
9. Diagnostic curative hysteroscopy

Specialized activities in the field of midwifery
1. Caring before, during and after pregnancy
2. Doing natural, physiologic, painless and cesarean delivery

Type of specialty: High-risk pregnancy

Sub-special and surgical services (High-risk):
1. Screening genetic syndromes such as Down
2. Diagnostic affairs before birth, sampling the afterbirth, amnion liquid and blood of the embryo
3. Caring the pregnant ladies that during pregnancy her health or embryo's health is in danger.

**Special midwifery activities and services**

1. Caring before, during and after pregnancy
2. Doing natural, physiologic, painless and cesarean delivery

**Other gynecology specialists of the hospital**
Dr. MarziehParizad, Dr. RaziehVejdani

**Other doctors of the hospital**

**Anesthetists of the hospital**
Dr. FarnazMoslemiTabrizi, Dr. SiminAtashkhouei, Dr. ReihanehAbriSardroudi, Dr. Poorfathi

**Internists**
Dr. FarzinHosseini, Dr. ParisaHefzollesan
- Emergency and non-emergency internist in all wards (Surgery, cesarean, ICU, High Risk, delivery and emergency wards)
- Visiting patients in clinic
- On-call in evening and morning shifts

**Pediatric specialists and infants subspecialist**
Dr. MohammadbagherHosseini, Dr. Majid Mahallei, Dr. ManizhehMostafaGharaaghi, Dr. MirhadiMousavi, Dr. Shalaleh Gangi

**Specialty: Infant evolution**
Dr. SeifollahHeidarabadi

**Specialty: Children and infants**
Dr. GhodratollahEivazi, Dr. MohammadhassanKargar Maher

**Specialty: Infant optometrist**
Dr. Amir AbdollahEftekhariMilani, Dr. Arash Taheri

**Specialty: Pediatrics**
Dr. SaadollahYeganehdoust

**Subspecialty: Pediatric Cardiologist**
Dr. Ahmad JameiKhosroshahi, Dr. BahmanRastkarHemmati, Dr. Mahmoud Samadi, Dr. ShamsiGhaffariBavilOlya, Dr. Akbar Molaei

**Specialty: Internist and subspecialist of kidney and blood pressure (Nephrology)**
Dr. ShabnamSalehi

**Specialty: Kidney and urinary meatus**
Dr. YadollahAhmadi

**Internist and cardiovascular subspecialist**
Dr. MasoumehAhmadzadeh

**Specialty: Cardiovascular specialist**
Dr. SakinehHadi
Specialty: Radiology
Dr. Fatemeh GhatrehSamani, Dr. Elham Eghbali, Dr. Mahnaz Ranjkesh, Dr. Batoul Seifi (Radiology and Ultra Sound check)

Specialty: Internist - adults' blood and cancer
Dr. Babak Nejati, Dr. Ali Esfahani, Dr. Akbari, Dr. Bustani

Specialty: Pharmacist
Dr. Elnaz Shaseb, Dr. Zeinab Mokhtari, Dr. Hoseini

Specialty: Biology of reproduction, clinical embryology
Dr. Maryam Pashaei Asl

Specialty: Pathology
Dr. Shokoohi, Dr. Haniyeh Taghizadeh, Dr. Fatahi

Specialty: Medical Genetics
Dr. Shiva Mansouri

Specialty: Legal Medicine
Dr. Paeizi

Specialty: Physiotherapy
Dr. Fariba Ghaderi

Specialty: PhD in Anatomic Science
Dr. Behrouz Niknafs

Specialty: PhD in Biochemistry
Dr. Mohammad Nouri

Specialty: Psychiatry
Fatemeh Ranjar Kouchaksarai

Internist and subspecialist of adults' digestion system and liver
Dr. Leila Alizadeh

General Physicians of the hospital
Dr. Soheila Poursaber, Dr. Younes Mohajjel

Social Doctor
Dr. Mahasti Alizadeh

Super Specialty Specialist
Dr. Hadi Sagaleini, Dr. Zohreh Ostadi

Endocrinologist and Metabolism Specialist
Dr. Sevil Ghafarzadeh, Dr. Sanaz Karimi Asl, Dr. Soheila Valizadeh
Tourism Attractions of Tabriz

About Tabriz:

Tabriz municipality palace

Tabriz the capital of East Azerbaijan province having 1200 square meter area is the third largest city of Iran after Tehran and Mashhad. The population of Tabriz is 1,579,312 (according to statistics of 2006) that considering the population it is the fourth most populated city of Iran after Tehran, Mashhad and Shiraz. Tabriz is restricted with Eynali Mt. in North, Sahand Mt. in South and to Tabriz plain and Urmia Lake in West. Since a long time ago Tabriz was an influential city in all political and economic and cultural exchanges of Iran. Tabriz was the first capital of Iran during Safavid era and crown prince's city during Qajarid era.

El Gölü

El Gölü or Shah Gölü is one of the most important tourism promenades in Tabriz which is located in Southeast of Tabriz and 7 kilometers away from the downtown. Shah Gölü means the pool of the king. Göl in Turkish means the pool. The first foundation of the pool goes back to era of AqQoyunlu kings and it was developed in Safavid era.

Azerbaijan Museum

Azerbaijan Museum is one of the most important museums of Iran and it is located in Imam St. and next to Blue Mosque. This museum is the second museum of the country after National Museum of Tehran. There many samples from pre-Islamic era and after Islam.

Maqbarat-olShoara (The tombs of the poets)

Maqbarat-olShoara is located in Seqqat-ol Islam St. and in the Northern wing of the SeyedHamzeh tomb. A beautiful monument with tourism facilities is established besides the site. The tomb of our great poet Shahriar is located in this place.
The Blue Mosque, Turquoise of Islam

Jahanshah Mosque or the Blue Mosque of Tabriz (Göy Maçıd) was built by Abulmuzaffer Jahanshah Ibn Qara Yusuf from QaraQoyunlu Turkman that was constructed under the supervision of Jan BeyimKhatoun, the wife of Jahanshah Ibn Qara Yusuf QaraQoyunlu and it is one of the masterpieces in Islamic era. The mosque is located in Imam Khomeini St. opposite to Sadr Alley and next to Khaqani Park.

Iron Age Museum Site of Tabriz

Iron Age Museum Site of Tabriz that is located in North, Northeast and Northwest of the Blue Mosque includes a cemetery and ceramic works of Iron Age. Iron Age Museum Site is one of the most interesting museums of the country that involves tombs of four thousand years ago in which the individuals are buried with their ornaments.

Ark of Tabriz- Alishah Mosque

Ark of Tabriz- Alishah Mosque is located in downtown in the Southern wing of Imam Khomeini and Ferdowsi streets. Ark of Tabriz is historical monument that was a part of a mosque which was built in the era of Tajeddin Alishah Jeylani one of Gurkanid kings in 14th century. The architectural style is Azerbaijani and the architect was Master Falaki Tabrizi. This Ark is one of the highest historical walls of the country and the symbol of Tabriz. The yard of the Ark is used for Friday praying and the Mosalla of Tabriz is built in this place.

Tabriz Bazaar

Tabriz Bazaar is one of the largest and the most important bazaars of the Iran and Asia. It is said that the total area of the bazaar is one square kilometer and the biggest roofed bazaar of the world. Tabriz Bazaar was registered as the first roofed bazaar of the world before UNESCO in August 2010.
